MEMORANDUM

DATE: May 23, 1991

TO: Neil Thompson, HWD-PO, USEPA, Region 10

THRU: Alexander Whitman, Program Manager, E & E, Seattle

FROM: David A. Ikeda, Chemist, E & E, Seattle
Lila Transue, Senior Chemist, E & E, Seattle

SUBJ: QA of Case 15614 (Organics)
Colbert Landfill

REF: Contract Number 68-09-0020
Work Assignment Number 20-05-OP15

CC: Barry Towns, Quality Assurance Officer, USEPA, Region 10
Carolyn Wilson, RSAC, USEPA, Region 10
Gerald Muth, CLP-TPO, USEPA, Region 10 Laboratory, Manchester
Lyle Diediker, Project Manager, E & E, Seattle

The Quality Assurance (QA) review of nine samples, Case 15614, collected from Colbert Landfill, has been completed. Four water samples were analyzed at low level for Target Compound List (TCL) organics and five water samples were analyzed at low level for TCL volatile organic compounds (VOCs) only by Mid-Pacific Environmental Laboratories of Mountain View, California. The samples were numbered:

JG254	JG258	JG570 (VOCs only)
JG255	JG566 (VOCs only)	JG571 (VOCs only)
JG257	JG567 (VOCs only)	JG572 (VOCs only)

Pesticide/polychlorinated biphenyl (PCB) and semivolatile matrix spike (MS) and matrix spike duplicate (MSD) analyses were not performed for this Sample Delivery Group (SDG). Sample JG566 underwent VOC MS and MSD analysis.

Data Qualifications

The laboratory analyzed samples based on the new Statement of Work (SOW) OLM01.0 dated March 1990. However, since the pesticide/PCB section of the new SOW is currently under revision, the pesticide/PCB analyses were reviewed based on the criteria outlined in the previous SOW (dated February 1988).

USEPA SF

ZR6030.5.0

The following comments refer to the laboratory performance in meeting the Quality Control (QC) specifications outlined in SOW OLM01.0 (March 1990) for VOCs and semivolatiles, and IFBWA-87K236-238 for pesticides/PCBs, following Laboratory Data Validation Functional Guidelines for Evaluating Organics Analysis (February 1, 1988).

1) Timeliness

Sample Number	Sample Date	Rec'd Date	VOC Anal.	BNA Extr.	BNA Anal.	Pest/PCB Extr.	Pest/PCB Anal.
JG254	12/18/90	12/20/90	12/27/90	12/21/90	01/07/91	12/21/90	01/08/91
JG255	12/18/90	12/20/90	12/27/90	12/21/90	01/07/91	12/21/90	01/08/91
JG257	12/18/90	12/20/90	12/27/90	12/21/90	01/07/91	12/21/90	01/08/91
JG258	12/18/90	12/20/90	12/27/90	12/21/90	01/07/91	12/21/90	01/08/91
JG566	12/18/90	12/20/90	12/27/90	N/R	N/R	N/R	N/R
JG567	12/18/90	12/20/90	12/27/90	N/R	N/R	N/R	N/R
JG570	12/18/90	12/20/90	12/27/90	N/R	N/R	N/R	N/R
JG571	12/18/90	12/20/90	12/27/90	N/R	N/R	N/R	N/R
JG572	12/18/90	12/20/90	12/27/90	N/R	N/R	N/R	N/R

VOC - Volatile Organic Compounds

BNA - Base, Neutral, and Acid Semivolatile Compounds

Pest/PCB - Pesticide/Polychlorinated Biphenyl Compounds

Anal. - Analysis Date

Extr. - Extraction Date

N/R - Analyses not requested.

All samples met holding time criteria for volatiles, semivolatiles, and pesticides/PCBs.

2) Instrument Tuning

All tuning check compound mass abundances and ratios were within contract-required limits for volatile and semivolatile analysis.

3) Initial Calibration

All volatile and semivolatile target compounds were within contract-required limits for the initial calibration with average Relative Response Factors (RRFs) above levels specified in SOW OLM01.0 for volatiles and semivolatiles. All volatiles and semivolatile target compounds were within contract-required limits for the initial calibration with Percent Relative Standard Deviations (%RSDs) below 30 percent, except:

Date	Fraction	Compound	%RSD	Associated Samples
11/15/90	BNA	4-Chloroaniline	44.2	*
		3-Nitroaniline	32.2	*

* JG254, JG255, JG257, JG258

For samples associated with the corresponding calibration and TCL compounds listed above, positive results and sample quantitation limits were flagged as estimated quantities (J_4 or UJ_4), as a high %RSD is indicative of poor system linearity.

4) Continuing Calibrations

All volatile and semivolatile target compounds were at or above the contract-required continuing calibration Relative Response Factor (RRF[50]) criteria specified in SOW OLM01.0 for volatiles and semi-volatiles.

All volatile and semivolatile target compounds that were detected in the samples had percent difference (%D) values for the continuing calibration of less than or equal to 25 percent.

5) Blanks

Frequency criteria were met for laboratory blank analysis.

The following compounds were detected in laboratory blanks at levels above Instrument Detection Limits (IDL), but below Contract Required Quantitation Limits (CRQL) for TCL compounds:

Blank ID	Fraction	Compound	Matrix	Conc. µg/L	CRQL µg/L	Associated Samples
SBLK 1	BNA	N-Nitrosodiphenyl-amine	Water	0.8	10	*

Conc. - Concentration

* JG254, JG255, JG257, JG258

Reported levels of the above compounds in the samples were flagged "UJ₁" (estimated quantitation limit) if the concentrations were below five times the concentrations found in the appropriate blank (10 times for common solvents).

No Tentatively Identified Compounds (TICs) were identified in the laboratory blanks.

6) Pesticide Standards

a) Linearity

The evaluation standards were within the contract-required limits for the initial calibration with percent relative standard deviations (RSDs) below 10 percent, except:

Date	Compound	%RSD	QC Limit	Associated Sample
01/24/91	Endrin	15.0	10%	JG257
	4,4'-DDT	13.2	10%	JG257

Quantitation limits for the above compounds were flagged as estimated (UJ₄) in sample JG257.

b) DDT Retention Time

The retention time for DDT on the primary and secondary GC column met or exceeded 12 minutes for the standard runs.

c) Retention Time Windows

The retention time windows met the contract specifications.

d) Analytical Sequence

The analytical sequence met the contract-required frequency and order.

e) 4,4'-DDT/Endrin Degradation

The percent breakdown for Endrin and DDT met the contract limit of 20 percent for the individual or combined breakdown totals.

f) Surrogate Retention Time Shift

The Percent Difference calculated for the retention time of surrogate compounds did not exceed 2 percent for the packed column.

g) Standards Summary

All compounds that were detected in the samples had percent difference (%D) values for the continuing calibration of less than or equal to 15 percent.

7) Surrogate Recovery

Recoveries (%R) for all surrogate compounds for volatile, semi-volatile, and pesticide/PCB analyses met QC criteria, except:

Sample Number	Compound	%R	QC Limits
JG254	Tetrachloro-m-xylene	52	60 - 150
JG255	Tetrachloro-m-xylene	53	60 - 150
JG257	Decachlorobiphenyl	169	60 - 150
JG258	Tetrachloro-m-xylene	48	60 - 150

No action was taken based on the pesticide/PCB surrogate outliers.

All volatile and semivolatile surrogate analysis met contract specifications.

All surrogate compounds met calibration QC criteria.

8) Matrix Spike and Matrix Spike Duplicate

All volatile MS and MSD percent recoveries (%Rs) met advisory QC guidelines. No MS or MSD analyses were performed for the semivolatile and pesticides/PCB fractions for this case. No action was taken.

9) Internal Standard Recovery

All internal standard areas were within established QC limits.

10) Sample Analysis

All reported results above IDLs but below CRQLs were flagged as estimated quantities (J) on the Data Sheets.

Sample JG257 was reanalyzed for pesticides/PCBs because of poor recoveries for both surrogate compounds. The reanalysis was within established regional holding time criteria with only one surrogate outside advisory QC limits. The second pesticide/PCB analysis for sample JG257 was reported with this memorandum.

Methoxychlor results for sample JG255 were flagged as tentatively identified (NJ₄), as the calculated concentration of methoxychlor for the quantitation and confirmation columns exceeded QC criteria of less than or equal to 25 percent difference.

11) Laboratory Contact

The laboratory was contacted on March 14, 1991 (see attached Telephone Record Log).

Data Use

The usefulness of the data is based on the criteria outlined in the "Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses" (February 1, 1988); the Data Qualifier Definitions supplied by the Office of Solid Waste and Emergency Response (September 1989); and the Regional Protocol for Holding Times, Blanks, and VOA Preservation (April 13, 1989).

Data Qualifiers

U - The material was analyzed for, but was not detected. The associated numerical value is a contractual quantitation limit, adjusted for sample weight/sample volume, extraction volume, percent solids and sample dilution.

J - The analyte was analyzed for and was positively identified, but the associated numerical value may not be consistent with the amount actually present in the environmental sample. The data should be seriously considered for decision-making and are usable for many purposes.

UJ - The material was analyzed for, but was not detected. The associated numerical value is an estimated/adjusted quantitation limit. The associated numerical value may not accurately or precisely represent the concentration necessary to detect the analyte in this sample.

A subscript will be appended to the "J" qualifier or the "UJ" qualifier that indicates which of the following quality control criteria were not met:

1. Blank contamination: indicates possible high bias and/or false positives.
2. Calibration range exceeded: indicates possible low bias.

3. Holding times not met: indicates low bias for most analytes with the exception of common laboratory contaminants and chlorinated ethenes (i.e., trichloroethene, 1,1-dichloroethene, and vinyl chloride).
4. Other QC outside control limits: bias not readily determined.

These subscripts will only be employed when a single qualification is required. When more than one quality control parameter affects the analytical result, the result will be flagged "J" without subscript. In the case where the analytical result is greater than the IDL but less than the CRQL the result will be flagged "J" without subscript.

R - Quality Control indicates that data are unusable for all purposes. The analyte was analyzed for, but the presence or absence of the analyte has not been verified. Resampling and reanalysis are necessary for verification to confirm or deny the presence of an analyte.

N - Presumptive evidence of presence of material (tentative identification). Confirmation of the analyte requires further analysis.

NJ - The analysis indicates that the analyte is tentatively identified and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

A subscript will be appended to the "NJ" qualifier that indicates which of the following situations applies:

1. DDT/Endrin breakdown evident.
2. Interference by other sample components.
3. Non-Target Compound List (TCL) compounds (confirmation is necessary using specific target compound methodology to accurately determine the concentration and identity of the detected compounds).
4. A confirmation analysis was missing or quality control criteria were not met for the confirmation analysis.

These subscripts will only be employed when a single qualification is required. When more than one quality control parameter affects the analytical result, the result will be flagged "J" without subscript.

- M - Mass spectral criteria for positive identification were not met. However, in the opinion of the laboratory, the identification is correct based on the analyst's professional judgement.
- X - The reported result may be a combination of indistinguishable isomers.

Call Initiated By: Laboratory Region

In reference to data for the following sample number(s):

SAMPLES JG 254, JG 255, JG 257, AND JG 258 (PEST /PCBs)

Summary of Questions/Issues Discussed:

1. VERIFY SAMPLE RESULTS FOR METHOXYCLOR IN SAMPLE JG 257. FORM I = 0.0504, / CALCULATED 0.051M.

Summary of Resolution:

1. THE LABORATORY DID NOT RESPOND TO THE ISSUE / QUESTION IN A TIMELY FASHION, EVEN AFTER BEING CONTACT ABOUT TEN TIMES. METHOXYCLOR RESULTS IN SAMPLE JG 257 WAS CORRECTED ON THE FORM I.
